

THE ENDOCANNABINOID SYSTEM

THC / CBD

While THC binds directly to the receptor sites, essentially mimicking the body's own neurotransmitters, CBD delays the reuptake and breaking down of endogenous cannabinoids, thus increasing the concentration of these neurotransmitters in your system.

CB1

CB1 receptors are found more prominently in the brain and central nervous system,

CB2

CB2 receptors are found in the peripheral nervous system, the gastrointestinal tract, and on immune cells
